EXPERIENCE

Software Engineer Internship

At Academlo, March 2023 - April 2023

Development of the web application on the backend side by using Node.js. Controllers and services were optimized to implement the necessary routes in the API that was later consumed by the frontend.

I learned to make migrations in the databases, a better management of github and the technologies that are used in the daily work environment in the area of software development for web applications.

Finance, administration and transport fleet captain

At Crumed, September 2019 - September 2021

Take finance and business administration. Organize the transport fleet, deal directly with companies.

E-commerce development

At La telier, January 2013 - February 2023

Backend development of the API for user management and product storage, purchasing and sales control, and a payment gateway.

Responsive frontend development with Next.js
